

Temporal fusion

Between keyframes a capped number of unprotected patches keeps the previous call's token.

Depth pruning

With the first layers and the last kept, the lowest in Block Influence are removed, none adjacent.

Guarded reuse

When image and action gates pass, the call is skipped and a_{t-1} repeated, up to a cap.

Foveation

The image is blurred outside a central disc and keeps its token count.

Action repeat

Each action is held k steps, the call skipped.

Dots mark where each intervention enters the loop, the diamond marks the reuse gates, and the dashed path is a skipped call.
