

Guarded reuse

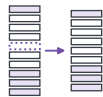

While the image and action gates pass, the call is skipped and the previous action repeated, up to a cap.

Temporal fusion

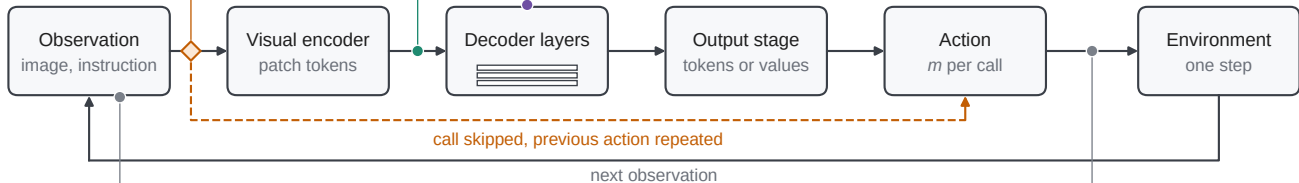

Unprotected patches keep their token from the previous call, up to a fixed share of all patches.

Depth pruning

The layers lowest in Block Influence are removed, none adjacent, the first layers and the last kept.

Foveation

The image is blurred outside a central disc, the token count unchanged.

Action repeat

Each action is held for k steps with one call.
