

Temporal fusion

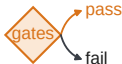

Patches that did not move keep the token from the previous call.

Depth pruning

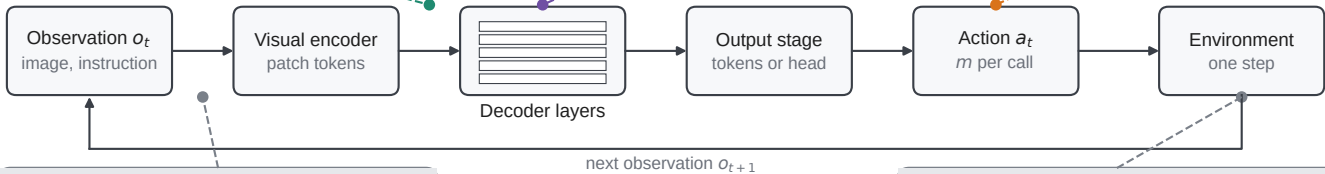

Layers lowest in block influence are removed, the ends are kept.

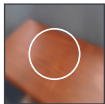

Guarded reuse

The call is skipped and a_{t-1} repeated while the gates pass.

Foveation

Blurred outside a central disc, the token count is unchanged.

Action repeat

Each action is held k steps.

Coloured cards are the candidates, each gated by a signal it computes at run time. Grey cards are the ungated controls. Dots mark where each enters the loop.
